# Learning Objectives

- At the end of this presentation you should know:
  - How the orientation of a building on a site affects the interior.
  - How to measure your carbon footprint.
  - How to document development density and community connectivity.
  - How to document public transportation access.
  - How to document bicycle parking, showers and changing rooms.
  - How to estimate the amount of program area (square footage) to allocate for recycling in a commercial project.
  - How to document regional materials.

# LEED 2009 for Commercial Interiors

## Project Checklist

Project Name

Date

Sustainable Sites			Possible Points: 21
Y	N	?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 1 Site Selection 1 to 5
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 2 Development Density and Community Connectivity 6
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 3.1 Alternative Transportation—Public Transportation Access 6
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 3.2 Alternative Transportation—Bicycle Storage and Changing Rooms 2
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 3.3 Alternative Transportation—Parking Availability 2

Water Efficiency			Possible Points: 11
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Prereq 1 Water Use Reduction—20% Reduction
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 1 Water Use Reduction 6 to 11

Energy and Atmosphere			Possible Points: 37
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Prereq 1 Fundamental Commissioning of Building Energy Systems
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Prereq 2 Minimum Energy Performance
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Prereq 3 Fundamental Refrigerant Management
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 1.1 Optimize Energy Performance—Lighting Power 1 to 5
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 1.2 Optimize Energy Performance—Lighting Controls 1 to 3
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 1.3 Optimize Energy Performance—HVAC 5 to 10
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 1.4 Optimize Energy Performance—Equipment and Appliances 1 to 4
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 2 Enhanced Commissioning 5
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 3 Measurement and Verification 2 to 5
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 4 Green Power 5

Materials and Resources			Possible Points: 14
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Prereq 1 Storage and Collection of Recyclables
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 1.1 Tenant Space—Long-Term Commitment 1
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 1.2 Building Reuse 1 to 2
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 2 Construction Waste Management 1 to 2
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 3.1 Materials Reuse 1 to 2
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 3.2 Materials Reuse—Furniture and Furnishings 1
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 4 Recycled Content 1 to 2
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 5 Regional Materials 1 to 2
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 6 Rapidly Renewable Materials 1
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Credit 7 Certified Wood 1

Indoor Environmental Quality			Possible Points: 17
Y	N	?	
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Prereq 1 Minimum IAQ Performance
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Prereq 2 Environmental Tobacco Smoke (ETS) Control

## Percentages

### LEED 2009 for Commercial Interiors

<b>Section</b>	<b>Possible Points</b>	<b>Percentage</b>
Sustainable Sites	21	19.09%
Water Efficiency	11	10.00%
Energy and Atmosphere	37	33.64%
Materials and Resources	14	12.73%
Indoor Environmental Quality	17	15.45%
Innovation and Design Process	6	5.45%
Regional Priorities	4	3.64%
<b>TOTAL POINTS POSSIBLE</b>	<b>110</b>	

## Earth Facts (1 of 3)

1. *The Earth was formed 4.6 billion years ago.*
2. *The Earth is the third planet from the Sun.*
3. *The Earth orbits the Sun once every 365.27 days and the orbital speed the Earth travels is averaged at 107,000 km/h.*
4. *The Earth has one satellite, the Moon.*
5. *The surface of the Earth is 70% water and 30% land.*
6. *The circumference of Earth around the equator is 24,901 miles.*

## Earth Facts (2 of 3)

- 1. The earth is made from the following materials – 32.1% iron, 30.1% oxygen, 15.1% silicon, and 13.9% magnesium.*
- 2. The Earth's core is made up of 88% iron, and the temperature can reach 3,000 degrees C.*
- 3. The atmosphere on Earth is composed largely of nitrogen (78%) and oxygen (21%) with trace elements of other gases.*
- 4. The troposphere is the region in the atmosphere 12km above the surface of the Earth. It is in the troposphere that all of our weather takes place.*

## Earth Facts (3 of 3)

1. *Approximately 25km above the surface of the Earth is the ozone layer. This is a layer of ozone that protects the Earth from the Sun's harmful ultraviolet radiation.*
2. *The atmosphere extends as far as 500 km and the Earth's magnetic field stretches as far as 100,000 km.*
3. *The magnetic field is essential because it protects us from the Sun's solar winds.*

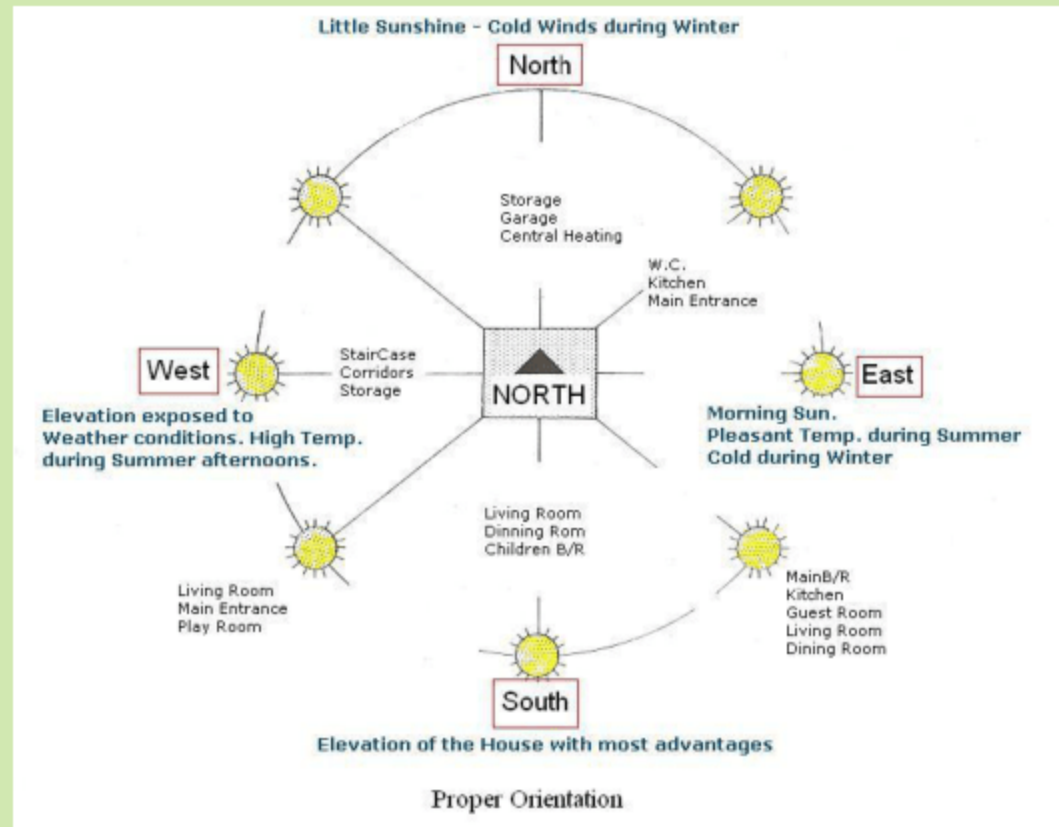

71% of the earth's surface is covered with water

## Site Orientation – in the Northern Hemisphere

1. Eastern exposure: morning sun
2. Southern exposure: sun throughout the day
3. Western exposure: late afternoon sun
4. Northern exposure: little direct sun except at sunrise and sunset in the spring and fall
5. North and South are reversed in the Southern Hemisphere
6. Direction of prevailing winds
7. Direction of views

## Carbon Footprint

Where would your carbon footprint be smaller:

1. on the farm in the photo to the near right, or
2. in the city on the photo to the far right?

Why?

# Measure your Carbon Footprint

Use the following site to measure your carbon footprint:

<http://www.nature.org/greenliving/carboncalculator/>

What is your carbon footprint?

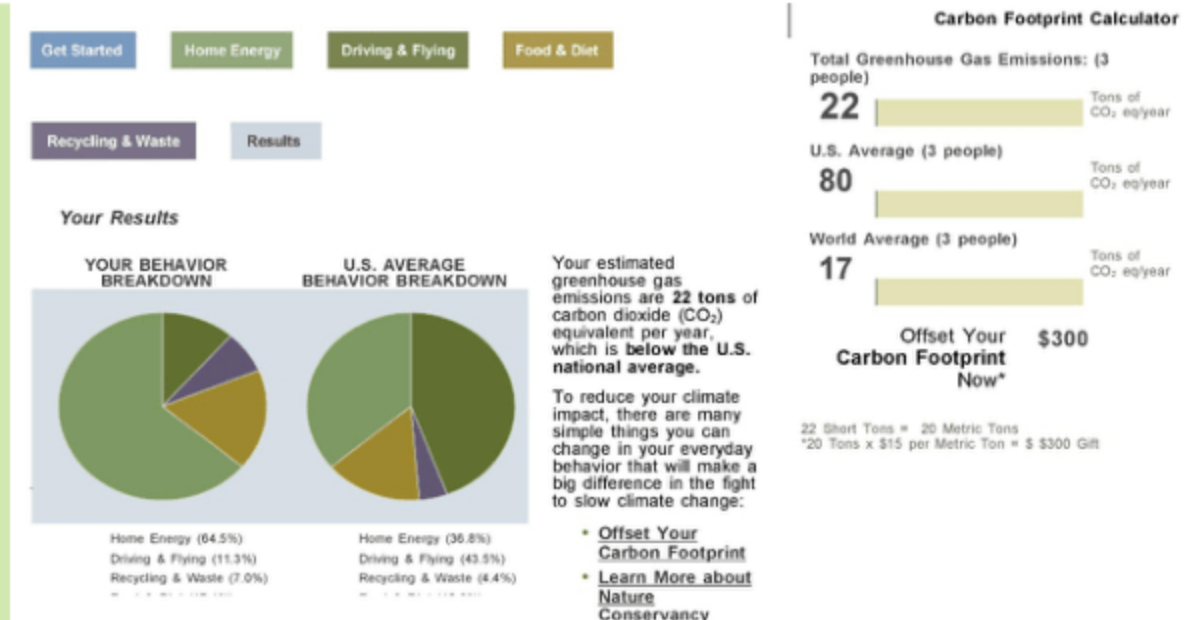

Are you above or below the U.S. average?

Are you above or below the world average?

Were you surprised by the results?

What are the leading contributors to your carbon footprint?

What can you do to reduce your carbon footprint?

# Sustainable Sites Credit 2

## Development Density and Community Connectivity

Option 1: minimum density of 60,000 sf per  
acre net

Option 2: located within 1/2 mile of a  
residential neighborhood; within 1/2 mile of at  
least 10 basic services; and has pedestrian  
access between the building and the services.

### OPTION 1. Development Density

Select space in a building that is located in an established, walkable community with a minimum density of 60,000 square feet per acre net. The density calculation is based on a typical two-story downtown development and must include the area of the project being built.

OR

### OPTION 2. Community Connectivity

Select space in a building on a site that meets the following criteria:

- Is located within 1/2-mile of a residential area or neighborhood with an average density of 10 units per acre net
- Is within 1/2-mile of at least 10 basic services
- Has pedestrian access between the building and the services.

For mixed-use projects, no more than 1 service within the project boundary may be counted as 1 of the 10 basic services, provided it is open to the public. No more than 2 of the 10 services required may be anticipated (i.e. at least 8 must be existing and operational). In addition, the anticipated services must be documented appropriately to demonstrate that they will be operational in the locations indicated within 1 year of occupation of the applicant project.

Examples of basic services include the following:

- |                       |                            |                    |
|-----------------------|----------------------------|--------------------|
| • Bank                | • Hardware                 | • Post Office      |
| • Place of Worship    | • Laundry                  | • Restaurant       |
| • Convenience Grocery | • Library                  | • School           |
| • Day Care Center     | • Medical or Dental Office | • Supermarket      |
| • Cleaners            | • Senior Care Facility     | • Theater          |
| • Fire Station        | • Park                     | • Community Center |
| • Beauty Salon        | • Pharmacy                 | • Fitness Center   |
|                       |                            | • Museum           |

Proximity is determined by drawing a 1/2-mile radius around a main building entrance on a site map and counting the services within that radius.

Greenfield developments and projects that do not use existing infrastructure are not eligible.

# Sustainable Sites Credit 2

Development Density and Community  
Connectivity

Option 1: minimum density of 60,000 sf per  
acre net

Example of a density calculation

**Table 3. Sample Area Properties**

Properties within Density Radius	Building Space (sf)	Site Area (acres)		Properties within Density Radius	Building Space (sf)	Site Area (acres)
Project Site	30,000	0.44		M	24,080	0.64
A	33,425	0.39		N	28,740	0.3
B	87,500	1.58		O	6,690	0.15
C	6,350	0.26		P	39,000	0.39
D	27,560	0.32		Q	348,820	2.54
E	66,440	1.17		R	91,250	1.85
F	14,420	1.36		S	22,425	0.27
G	12,560	0.2		T	33,650	0.51
H	6,240	0.14		U	42,400	0.52
I	14,330	0.22		V	—	0.76
J	29,570	0.41		W	19,200	0.64
K	17,890	0.31		X	6,125	0.26
L	9,700	0.31				
Total Building Space (sf)					1,018,36	
Total Site Area (acres)					5	15.94
Average Density (sf/acre)						63,887

For this example, the average building density of the surrounding area is greater than 60,000 square feet per acre, so the example qualifies for 6 points under this credit.

# Sustainable Sites Credit 2

Development Density and Community  
Connectivity

Option 2: located within ½ mile of a  
residential neighborhood; within ½ mile of at  
least 10 basic services; and has pedestrian  
access between the building and the services.

Example of a community connectivity map

Figure 1. An illustration of a Sample Area Plan

## Sustainable Sites Credit 3.1

Alternative Transportation – Public  
Transportation Access

Option 1: within ½ mile walking distance to a  
commuter rail, light rail, or subway station.

Option 2: within ¼ mile walking distance to a  
bus stop

Example map

**Figure 1:** Sample Area Drawing: Distance to Rail

# Sustainable Sites

## Credit 3.2

Alternative Transportation – Bicycle Transportation

### **Requirements**

Provide secure bicycle racks and/or storage (within 200 yards of a main building entrance) for 5% or more of tenant occupants (measured at peak periods).

Provide shower and changing facilities in the building, or within 200 yards of a building entrance, for 0.5% of full-time equivalent (FTE) occupants.

## Sustainable Sites

### Credit 3.2

Alternative Transportation – Bicycle  
Transportation

#### Example:

- 100 full-time equivalents (FTEs)
- $100 \times .05 = 5$  bicycle parking spaces within 200-yards of the building entrance.
- $100 \times .005 = 0.5 = 1$  changing and shower facility in the building or within 200-yards of the building entrance.

## Sustainable Sites Credit 3.2

Alternative Transportation – Bicycle  
Transportation

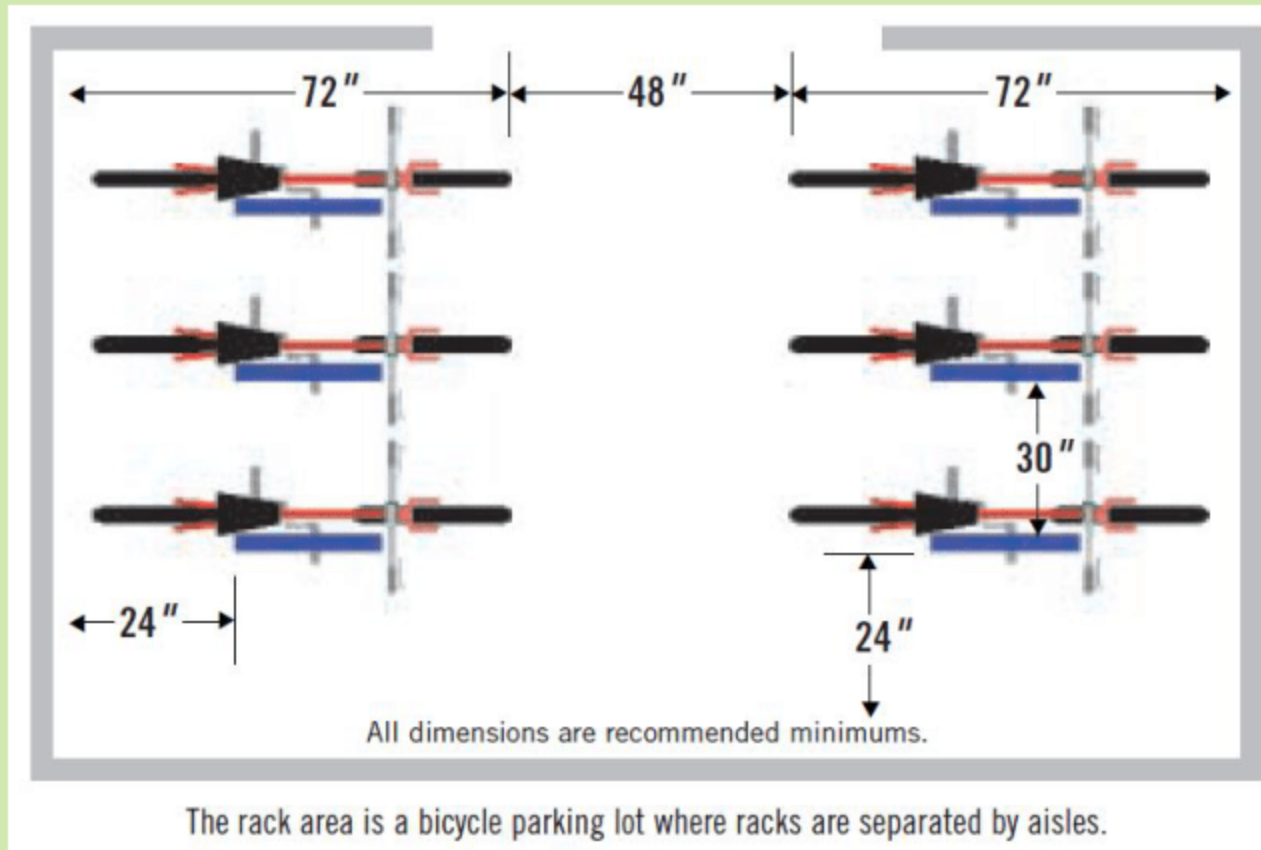

Bicycle parking space planning  
requirements

Considerations:

- Space utilization
- Safety and liability

Reference:

[ource/resmgr/publications/bicycle\\_parking\\_guidelines.pdf](#)

## Sustainable Sites Credit 3.2

Alternative Transportation – Bicycle Transportation

Shower and changing facility space planning requirements

Other considerations:

- Additional use of space
- Additional utility use: water, HVAC, electricity
- Lockers and storage
- Towel service and/or laundry requirements
- Can use a local fitness center if located within 200 yards of the building entrance

Reference: XXXXXXXXXX  
[Residential-Pricing-Set](#)

## LEED-CI 2009 MR Prereq 1

Storage and collection of  
recyclables.

Figure 1 shows a typical breakdown  
of waste stream materials.

The 5 materials required for  
collection:

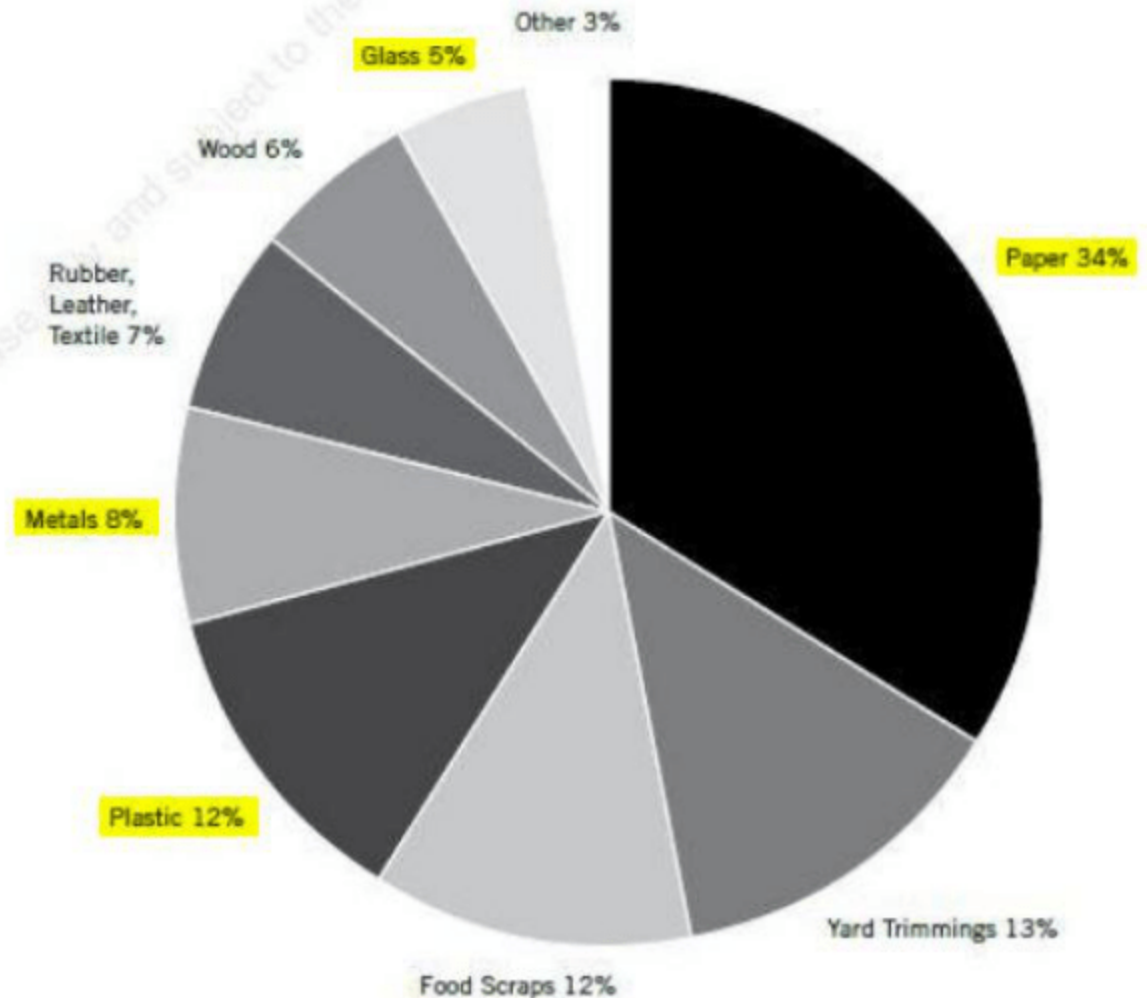

Cardboard and Paper	34%
Plastics	12%
Metals	8%
Glass	5%
Yard Trimmings	13%

Comprise 59% of the waste stream

Recycling reduces the amount of  
waste disposed in sanitary landfills.

**Figure 1. Municipal Solid Waste Generation**

Data from U.S. Environmental Protection Agency, 2006.

## LEED-CI 2009

### MR Prereq 1

Storage and collection of recyclables.

Paper

Corrugated cardboard

Glass

Plastics

Metals

Show collection areas in plan

Or

Provide a letter from the landlord outlining the building's recycling program.

LEED-CI

LEED FOR COMMERCIAL INTERIORS

LEED-CI 2.0 Letter Template  
MR Prerequisite 1: Storage & Collection of Recyclables

design

(Architect, Building Owner or Other Responsible Party)

I, **Your Name Here**, declare to USGBC that an easily accessible area of appropriate size has been dedicated to serve the recycling needs of the tenant space and the separation and storage area for recycling will accommodate the following materials (at a minimum):

- Paper
- Corrugated cardboard
- Glass
- Plastics
- Metals

I have provided the following supplementary documentation to support the declaration:

- A plan showing the area(s) dedicated to recycled material collection and storage.
- OR
- Provide a letter from the landlord outlining the building's recycling program.

## LEED-CI 2009 MR Prereq 1

Storage and collection of recyclables.

Use this table to estimate the amount of program area (square footage) to allow for a recycling area.

Example:

How much space should you allocate for a recycling area for a 20,000 square foot commercial office space?

How much space should you allocate for a recycling area for a 66,000 square foot commercial office space?

**Table 1. Recycling Area Guidelines**

Building Size (sf)	Minimum Recycling Area (sf)
0 to 5,000	82
5,001 to 15,000	125
15,001 to 50,000	175
50,001 to 100,000	225
100,001 to 200,000	275
200,001 or greater	500

## LEED-CI 2009

### MR Prereq 1

Storage and collection of recyclables.

For this approximately 900 sf apartment.

1. Use MR Prereq 1, Table 1 to determine how much space should be allocated for recycling.
2. Indicate on plan where you would recommend locating the recycling area.

## LEED-CI 2009 MR Prereq 1

Storage and collection of  
recyclables.

For this approximately 900 sf  
apartment.

1. MR Prereq 1, Table 1 recommends for 0 – 5,000 sf that 82 sf is allocated for recycling; however this is for a commercial application.
2. Recycling Location Option 1: centrally located, and close to the entry.
3. Recycling Location Option 2: located near the kitchen – assumes most recycling is generated nearby.

# LEED-CI 2009

## MR Prereq 1

Storage and collection of recyclables.

Possible solutions:

# LEED-CI 2009

## MR Credit 5

### Regional Materials

#### Goals:

To reduce transportation costs and carbon footprint.

To support the local economy.

#### Requirements

##### OPTION 1 (1 point)

Use a minimum of 20% of the combined value of construction and Division 12 (Furniture) materials and products that are manufactured<sup>1</sup> regionally within a radius of 500 miles.

OR

##### OPTION 2 (2 points)

Meet the requirements for Option 1.

Use a minimum of 10% of the combined value of construction and Division 12 (furniture) materials and products extracted, harvested or recovered, as well as manufactured, within 500 miles of the project.

## LEED-CI 2009

### MR Credit 5

#### Regional Materials

500-mile radius from New York City

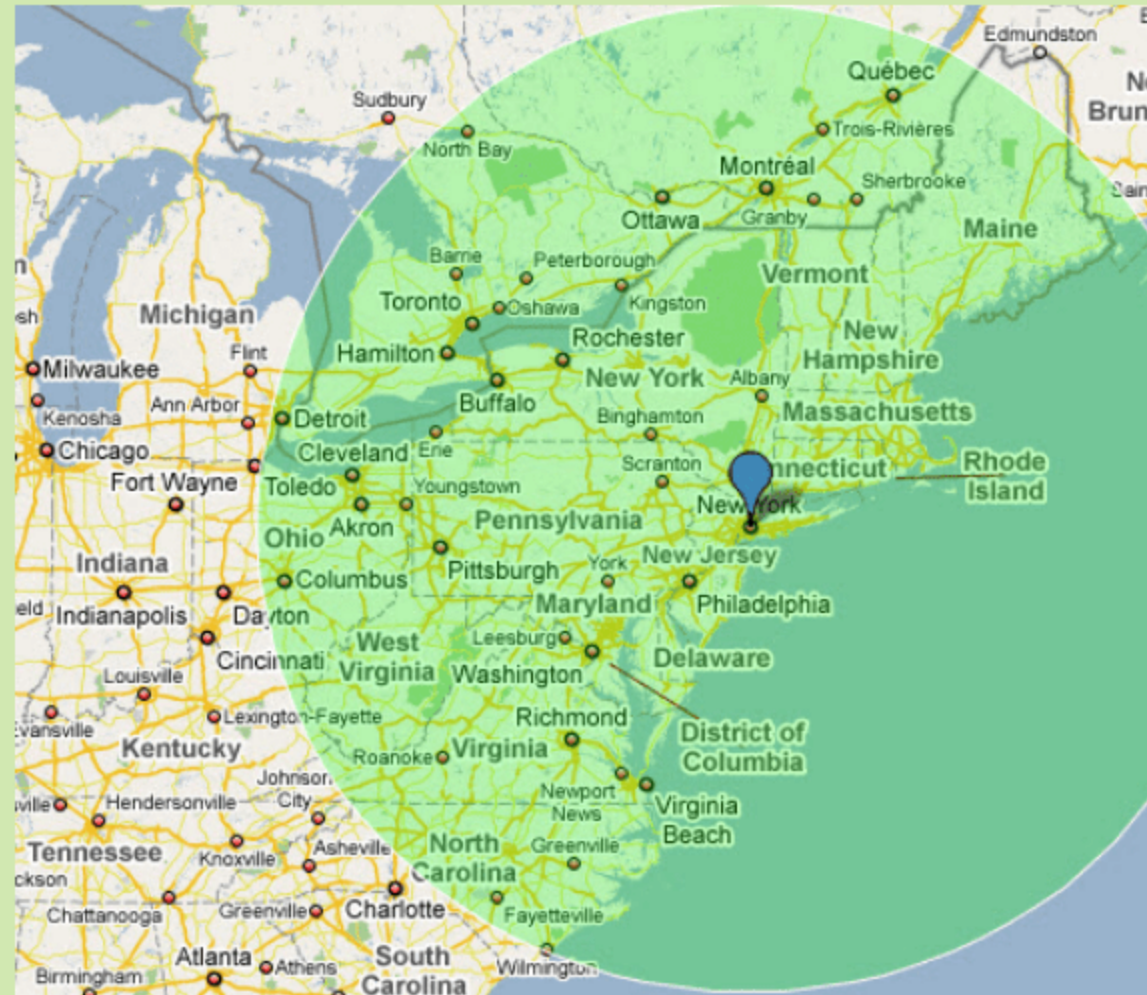

Is the product manufactured within 500-miles of the project site?

Is the product extracted, harvested, or recovered within 500-miles of the project site?

Does a product manufactured in Asheville, NC qualify?

Does a product manufactured in Montreal qualify?

Reference: [\[redacted\] mile-radius-york/](#)

# LEED-CI 2009 MR Credit 5

## Regional Materials

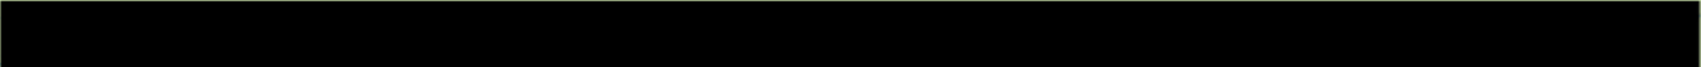

Sample calculation for regional materials

- Distance between project site and manufacturer: >20% target.
- Distance between project site and point of extraction: >10% target.

**Table 2.** Sample Spreadsheet for Regional Materials

Product	Manufacturer	Distance Between Project & Manufacturer (miles)	Product Cost (\$)	Distance Between Project & Extraction site (miles)	Product Cost (\$)	Regional Content Information Source
Concrete (manufactured and extracted)	Omega Mix	5	926	370	926	Letter from supplier
Concrete (just manufactured)	Omega Mix	5	74			
Wood Panelling	Zeta Panels	25	6,000			Contractor submittal
Casework	Chi Casework	20	30,000			Letter from fabricator
Gypsum wall	Nu Gyps	320	9,900	312	9,900	Letter from fabricator
Wood flooring, salvaged	Xi Floors	20	2,640			Cut sheet
Ceiling light fixtures	Omicron Luminaire	275	21,000			Product brochure
Furniture, reused	Pi Works	45	203,700			Letter from prior owner
Component Totals			\$274,240		\$10,826	
Total Construction Material Value						\$341,214
Division 12 Material Value						\$598,722
Total Project Material Value						\$939,986
Percent Manufactured Regionally (274,240/939,986)						29.2%
						29.2% > 20% MR 5, 1 point earned
Percent Both Manufactured Regionally & Extracted Regionally (10,826/939,986)						1.2%
						1.1% < 10.0% MR 5, 2nd point not earned
