Yahoo is saying someone tried to use an app they don't like with the correct username & password, so they blocked it. The hackers are probably trying to run a script they wrote to send out spam or phishing emails.

That means the password for that account should be changed ASAP.

V. is suggesting adding two factor authentication -- where yahoo sends a txt message with a second one-time code to Jeffrey every time he logs in with a new browser. It's not a bad idea, but can be annoying as hell with as many computers Jeffrey has (and if he doesn't have his phone at that moment, he's locked out).

Thank you,

 James Ce, your Personal Genius,

Probably a VPN/a compromised host used as trampoline.

Do you have 2fa on that account?

Hi jeffrey,

Someone attempted to sign in to your Yahoo account (littlestjeff) from an app that doesn't meet Yahoo's security standards. We blocked this sign in attempt, which was made on:

Wed, Jul 27, 2016 4:00 PM GMT+5:30 from India.

If you were trying to sign in, then please take one of these actions:

Option 1 (recommended): Use [REDACTED] or the Yahoo Mail app for Android and iOS to more

securely access your account.

Option 2 (not recommended): If you still want to use an app that uses less secure sign in to your Yahoo account:

1. Click here:

[REDACTED]

2. Turn on "Allow apps that use less secure sign in"

3. Go back to your existing email application and sign in to your Yahoo account again.

Using apps that don't meet Yahoo's recommended security standards may leave your account more vulnerable or less secure.

If you did not try to sign in, then click here

[REDACTED] and

change the password for your account.

For more information, visit our help page at:

[REDACTED]

Sincerely,
Yahoo
