Subject: Hebrew University Supplies Clean Water

Date: Thu, 20 Apr 2017 13:07:39 +0000

Pioneering research promises clean water... *for everyone.*

[View this email in your browser](#)

Clean water is an everyday necessity, yet not readily available to all. Current water filtration technologies are too expensive for developing nations and still don't adequately remove all pollutants that are harmful and sometimes lethal.

That's why Hebrew University is pioneering research to develop better, more efficient and affordable clean-water technologies. HU scientists are creating custom-tailored clay sorbents (materials used to absorb liquids) that can target specific pollutants more effectively.

Thanks to the discoveries made at the Hebrew University of Jerusalem, one day, clean drinking water may be accessible around the world! That's great news, especially as we

celebrate Earth Day together on Saturday.

We invite you to [learn more](#) about how Hebrew University's research is improving lives — and to make a gift to AFHU to enable additional agricultural advancements.
