Subject: Speaker Options

Here are a few links to some good options for you.

I know you like the efficiency, impact, and crisp highs of the Klipsch speakers. This is the most advanced, newest, top consumer model that they make. It is a three way design, has 9" woofers and weighs 165lbs each. You could keep your existing rears, but I would buy the matching center. The cosmetics on the new rears are nice than your existing ones. One big benefit of these is you would not need to up your amplifier power. Check out the Stereophile review.

Retail is \$20k/pr.
The matching center is \$3500.00
Matching rears, \$200/ea

The Genelec speakers we spoke about are really designed to go behind cloth grills in a custom theater situation. Consequently, they aren't very pretty. The model we have in Denver that I was so impressed with is the 1038B. You would use one each for left and right. They make one in a center channel orientation. You could use your existing rears. Also, they are tri-amplified with built in amps, so you wouldn't need a couple of the Muse amplifiers. These are great speakers, but may not be the best for this application.

Retails for \$17k/pr
Matching center is \$8500.

The best we have is the top series from Focal, the Utopia series. this is the most striking, best sounding speaker line we carry. They are quite a bit less efficient than the Klipsch and they can really show the differences in quality of amplifiers, so you would want to step up the quality of the front speaker amps. The 3 top models are.

Grand Utopia \$194k/pr
Stella Utopia \$97k/pr
Maestro Utopia \$52k/pr

Matching center
Viva Center Utopia \$15k

Rears
SR3000be \$3000/ea

All prices are before your discount.

Lyric HiFi in New York has a pair of the Focal Utopia Scalas at \$34k/pr on display. I have a call into Focal to see where the upper models are displayed. I'll contact you with info. Let me know what else I can do to help!
