 bacteria

How does a bacterial pathogen that can colonize humans without causing symptoms also cause life-threatening, flesh-eating disease? **Professor Emanuel Hanski** explains why it happens and how his research opens the door to possible future treatments.

 [readmore](#)

 culture

A generally held assumption in various academic disciplines is that the way people perform various everyday activities is culturally determined. But a study by **Dr. Leore Grosman** and **Dr. Enore Gandon** indicates that different cultural approaches to various tasks do not necessarily produce different results.

 [readmore](#)

 depression

Despite recent progress in understanding depression, scientists still do not understand the biological mechanisms behind it well enough to deliver effective prevention therapy. Now, **Professor Raz Yirmiya** and his doctoral student **Tirzah Kreisel** have discovered a mechanism underlying the depressive symptoms brought on by exposure to chronic stress.
