quick update on this topic :)

I'm working on the website design and brand identity and on the deck explaining stages and steps of the project. lots of work, fun and some progress. I'll share site and deck with you when it's ready (EOM for deck, EOE for site, likely)

Thinking of naming it. I like **Satio**. I looked into Latin, the original language of science, and explored translations of the word "seed". Serendipitously I found this one word that had two meanings as a verb and as a noun:

noun - a sowing, a planting

verb - to satisfy

Scientists are people that satisfy their curiosity. Satio is a perfect word, a formula to describe what I want the portal to represent - to plant right seeds so scientifically meaning projects that satisfy curiosity, forward knowledge and enable life. internet now allows domains ".science", we can use "satio.science" as a website.

Subject: 'kickstarter' connecting scientists and businessmen

To: "jeffrey E." <jeevacation@gmail.com>

Jeffrey,

I chose great tech developers to work on 'kickstarter' connecting scientists and businessmen. It would be profiles for business people and profiles for scientists. Scientist's profile would be done by an editor to make sure what they write about themselves is clear for business people and increase their chances to get funding. We should make a messenger on our platform so they can talk to each other.

I'm trying to understand the following things. I'd appreciate if you share your thoughts on the bullets below.

- What criteria businessmen use for choosing a scientists for funding? MOST CHOOSE BY A DISEASE IN THE FAMILY. THEY HAVE TO BE ABLE TO EXPLAIN IT TO THEIR WIVES. . SO IT MUST BE PRESENTED AS FOR A 9 YEAR OLD

- What criteria scientists use for accepting or rejecting funds from a businessman? Any specific scientists I should talk to for better understanding?

AS LITTLE INTERFERENCE AS POSSIBLE

- Legal structure. How money is transferred between a businessman and a scientist if they matched (legal question)? Should we help them with the process?

THE MONEY CAN GO TO THE INTERNET CHARITY , AND THEN THAT ORG DISTRIBUTES.

My understanding is that we should take care of it so much as we can. Sometimes people wants to sponsor scientists and have taxes deducted. But they don't know how exactly to do that and don't have time to take care of it. We can solve it and offer easy way to do that. It will bring to us some people who met out of our website bc they can process transaction easily.

Do you know any good lawyers who can advice on that? Ideally if they have some experience in managing science/business relationships and motivated by the mission more than by money NO ONE BETTER THAN ME

- Should it be the third person between a scientist and a businessman or not? How else we can increase the conversion from connections into actual grants?

A CONDUIT AND MAYBE LATER SOME SUMMARIES.

- Number of projects to start with. Do you think we should start with ~100 science projects and 20-30 businessmen for a test? What areas are the most under financed but look interesting for non-science people? LESS THAN 50

- 100 science projects. Should it be 20/80? Like 20% of famous scientists for marketing and 80% of new perspective scientists? Scientists are not easy to talk to. I want to think how many people we can realistically recruit within 3 months (to start quickly)

- Businessmen. What is the criteria that we should use to pick right people? Net worth? Education? I assume the right type of businessmen are the people studied science when they were young. Any other criteria?
- I'm thinking about the interface. Should it be more like Kickstarter or more like tinder. Businessmen can swipe between projects on free time if it's something closer to tinder. It can increase conversation but it might look not cool enough for scientists... what do you think?
- Name. Any ideas? BUSINESSMAN HAVE NO TIME TO SWIPE IT SHOULD LOOK LIKE FUTIRISM WEBSITE.

Anything else important that I didn't mention? MANY THING :)

Masha
