Free Webinar: Battling Lyme Disease

 **NT Factor Energy
Lipids**

Do you or your doctor understand that Lyme is one of the most complex and challenging infections to diagnose and treat?

Textbooks indicate that Lyme disease is easily treated with three weeks of doxycycline.

However, documented research shows that treatment of Lyme is not nearly this simple.

In Part 2 of his Free Educational Webinar, one of the world's leading integrated medicine doctors, Leo Galland, MD, FACP, FACN will explain to healthcare practitioners the steps to take to help people overcome Lyme disease. This is a unique opportunity to learn from an award-winning doctor who is fighting Lyme disease.

If a patient is not rapidly cured with standard therapy, each of these possibilities must be carefully considered and comprehensively treated:

Co-infection. The ticks that spread Lyme disease may transmit other bacterial or parasitic infections that require their own specific treatments.

Bacterial persistence. Lyme bacteria have evolved ways to escape the effects of antibiotics and evade the immune system. Special measures are needed to overcome these stealth infections.

Autoimmune damage. Lyme can trigger the immune system to attack its own tissues, even when the infection is gone. Restoring immune balance is critical to recovery.

Dysbiosis. Treatment of Lyme disease will often destroy many normal bacteria, leading to bacterial dysbiosis and yeast overgrowth.

Hormone deficits. Chronic infection can disturb the function of hormone glands, especially the adrenals.

Detoxification. Chronic infection and its treatment may overload the body's ability to eliminate toxins. Nutritional deficits and environmental toxins can further impair detoxification, leading to a health crisis that prevents successful treatment of Lyme itself.

PillAdvised.com is proud to be partnering with [Designs for Health](#) to present this webinar series to advance integrated medicine and raise awareness of Lyme disease.
