9-23 Marsham Street
London SW1P 3DW

TICKETS:
£30 Standard
£50 Combo
(two tickets)

Jared Diamond, Pulitzer Prize winning author of *Guns, Germs, and Steel*, joins the how to: Academy to present a new view of crises – personal, national, and global – and how they may be dealt with.

In this special lecture for the how to: Academy, University of California Los Angeles Professor Diamond will examine how our knowledge of human nature through responses to personal crises may be used to understand the outcomes of national and global crises. Nations experience crises, whose solution requires adopting selective changes, and which some nations are more successful at solving than are other nations. We as individuals also experience personal crises, either associated with certain ages (e.g., teen-age or midlife crises) or else triggered by external shocks (e.g., relationship problems or break-ups, the death of a loved one, or a health or job or financial blow). The solution of a personal crisis also requires adopting selective changes, which some of us are more successful at accomplishing than are others of us.

Counsellors and therapists have identified many factors that make it more or less likely that an individual will overcome a personal crisis. Through a comparative survey of personal crises, seven recent national crises, two impending national crises, and the impending world crisis, Jared Diamond offers a new way to consider the politics, society, and psychology of crises. Book now to ensure that you have a place at this groundbreaking talk.

Jared Diamond is a Professor of Geography at the University of California, Los Angeles. He began his scientific career in physiology and expanded into evolutionary biology and biogeography. He has been elected to the National Academy of Sciences, the American Academy of Arts and Sciences, and the American Philosophical society. Among his many awards are the National Medal of Science, the Tyler Prize for Environmental Achievement, Japan's Cosmo Prize, a MacArthur Foundation Fellowship, and the Lewis Thomas Prize Honoring the Scientist as Poet, presented by Rockefeller University. He has published more than six hundred articles and his book, *Guns, Germs, and Steel*, was awarded the Pulitzer Prize.

This talk is delivered in collaboration with the University of California Los Angeles Global Forum.
